About the project

Students get to know each other and discover Maths in their world, by pictures, contests, drawings. Students will measure nature in particular the Earth circumference and use Maths to work on the results. Starting from their personal experience and local traditions, students will exchange recipes, will make proportions to cook some foreign dishes in their families, will prepare statistics about food and nutrition and will use them to discuss and reflect about food and inequalities in their countries and all over the world. Students will record and watch video-lessons.

AIMS

Learn about foreign culture and traditions. Use of Maths outside the classroom, measuring the circumference of the Earth and preparing foreign recipes. Notice the beauty of Maths. Use of Maths in Science and to analyze social phenomena (food distribution, diseases related to nutrition habits). First steps in peer-teaching. Collaborate with foreign students.

WORK PROCESS

First of all involved students will learn about the other culture and traditions, ... Next step is to compare the works of the students. Small contests between the students. Later on the students can work together on a questionnaire.

EXPECTED RESULTS

Twinspace with all the results of the project. Learning video. Questionnaire and presentation of the results.

Projekta apraksti, kuros iekļauti galvenie projekta elementi, ir publiski pieejami ikvienam, kas ir autorizējies eTwinning Live. Labi projekta apraksti var kalpot kā iedvesma citiem skolotājiem.
